

Drag/Propel Transfer Switches

Transfer switches can be expensive and difficult to maintain. Flanders Electric can help you find the transfer switch solution that you have been looking for. Choose between either a locomotive reversing switch re-manufactured to our exacting standards, or a brand new motor operated switch from Siemens.

Custom re-manufactured locomotive reversing switches are economical and tough!

- Electric over air operated for simplicity
- Rugged design proven over years of service
- High Reliability and Low Maintenance
- Usually can be installed in just ONE down day
- Simple operation and troubleshooting
- Retrofits easily into existing enclosures using existing wiring and usually in just one down day
- *COST EFFECTIVE!* One customer bought this switch for **less** than he paid for one set of renewal contacts from Brand X!

Siemens Type 711 DC motor operated switch with Type 712 switch modules.

- Contacts rated up to 1600A at 1500VDC
- Switch module maintains last state on loss of power
- Main switching contacts are silver plated for good electrical connections and utilize a wiping action for exceptionally high reliability
- Steel parts are dichromate finish for less corrosion
- Operating coils are molded construction for protection against environmental contaminants
